FOOD SERVICE PRODUCTS

From Natural Sustainable / Renewable Resources

Polylactic Acid (PLA) products

Polylactic Acid (PLA) is an environmentally friendly alternative to conventional, petrochemical-derived products. The lactate from which the material is produced is derived from annually renewable resources such as corn starch and other starch rich vegetable substances like sugar or wheat.

The production of PLA requires fewer fossil resources and generates fewer greenhouse gasses, in comparison to most traditional plastics.

PLA looks and feels like traditional plastic packaging - it is strong and durable to protect food and retain freshness. The products are crystal clear offering excellent presentation to the consumer.

Industrial composting of PLA products will lead to complete decomposition and biodegradation of the material.

*Please note that PLA products are currently only suitable for cold/warm food with a temperature range of -20°C to +50°C approximately, unless otherwise stated.

PLA Biodegradability

Nature Green™ PLA products retain their desired properties and shapes in room temperatures.

Biodegradation only starts under specific conditions like a biologically active environment as found in industrial composting facilities.

Temp	Environmental Conditions	Duration
60°C	When placed in an industrial composting machine that is both efficient and aerobic.	47 Days
40°C	When placed in a warm domestic compost heap with constant humidity.	120 Days
40°C	When placed in the ground or on a small compost heap.	1.3 Years
15°C	If buried underground.	2 Years
10°C	If buried in a cold environment.	2.6 Years
4°C	When discarded in a lake or in the sea.	4 Years

Fibre Moulded Products

Our range of compostable dinnerware and fast food boxes are made from renewable plant materials, which include sugar cane and reed fibre.

- o made from natural materials (non-wood plant)
- o suitable for use in Microwaves and chillers
- o awarded an international hygiene certificate
- o 100°C water resistance and 150°C oil resistance
- o meet international food safety standards
- o rigid, stable and safe to use
- o bio-degradable and compostable
